Has there been a time where a classmate cheated in a game or a test to outperform you?

Well you're in luck because today we are talking about fairness. Fairness is all about equality, justice, respect for everyone, and integrity and honesty. A ton of people argue about fairness and honestly it's probably something we all seek.

THESIS STATEMENT:

Fairness is just a fantasy, because luck is random at most times even when you already got unlucky. People would manipulate their gifts for wrong doing, while some people who do not have them would do the opposite. Karma does not always happen even when someone does something absurdly wrong. Therefore, fairness is simply just an illusion.

Topic Sentence:1

Luck is unpredictable because random events influence outcomes.

Teigen and Keren (2020) studied how people perceive random events and found that randomness is associated with outcomes that are difficult to predict. This supports the idea that some outcomes happen because of chance rather than because someone deserves them.

This supports the idea that some outcomes happen because of chance rather than because someone deserves them. Therefore, luck does not follow a fixed pattern and can affect people differently regardless of their efforts.

Topic Sentence:2

There is not always karma because some people get away with wrongdoing without being held accountable for their actions.

Ong, et al. (2022) found that belief in karma was not associated with actual trustworthy behavior. This supports the idea that people who do wrong do not necessarily receive consequences for their actions.

This supports the idea that people who do wrong do not necessarily receive consequences for their actions. Therefore, karma cannot always be relied upon to ensure fairness in this world.

Topic Sentence:3

Gifts are often manipulated and taken for granted by those who possess them. People may use their talents for harmful purposes without feeling guilt or shame

Sternberg (2012) explains that gifted individuals can still lack ethical behavior. This shows that having a talent or ability does not guarantee that a person will use it for good.

This means that not all gifted people use their gifts or talents wisely, while others who could benefit from them may not possess them at all.

RESTATE:

To put it simply, fairness can be seen as an illusion by many people who experience unfairness, luck is random and unpredictable for it happens because of chance rather than because someone deserves, people who have gifts do not always use them wisely, people who do wrong do not necessarily receive consequences for their actions.

KEY TAKEAWAYS:

- Luck is unpredictable and it happens because of chance rather than because someone deserves it.
- Gifted people do not always use their gifts wisely.
- Karma cannot always be relied on because people do not necessarily receive consequences for their actions.

FINAL THOUGHT:

While unfairness is not something we strive for, I think we can all agree that it is something that helps us grow. Facing and overcoming unfairness allows us to adapt and become stronger. Life would feel stagnant without challenges, as growth, evolution, and development often come from adversity. Just as you cannot see the beautiful stars without the darkness of space, you cannot experience genuine triumph without the possibility of unfair loss. Unfairness creates opportunities for virtue, choice, and compassion. We show kindness, offer help, and give to those in need because life is not fair to everyone. If there were no unfairness, helping others would become unnecessary or even impossible. True kindness has meaning precisely because the world is not always fair.
